

Five Questions to Ask When Choosing an Enterprise Storage-as-a-Service Provider

1

Do you offer cloud, on-premises and hybrid storage?

Zadara can be delivered to your on-premises data center. Or use Zadara in a hybrid configuration, with cloud and your premises connected seamlessly. Wherever you choose to get Zadara, you'll get our 24/7/365 management and included periodic upgrades.

2

How do you tackle 'noisy neighbors'?

Using Zadara you'll enjoy all the efficiencies of a multi-tenant environment, while also enjoying effective insulation from the 'noisy neighbor' problem. That's because with Zadara you get dedicated, not shared, resources.

3

Do you support all types of data?

Zadara is enterprise storage made easy. Any data type. Any protocol. Any location. Start by choosing block, file, or object storage. During setup you'll choose protocol, capacity, throughput, location, and any advanced data management solutions you want to add.

4

What is your pricing structure?

With Zadara you spend less time managing your enterprise storage, and you pay only for the capacity and throughput you actually use. When you compare that to costly and complex legacy storage, it's not even close.

5

What security measures do you use?

Use Zadara to automatically replicate data across geographic areas — and across multiple clouds — to ensure your mission-critical applications continue to run under almost any circumstance.
