

# CONTAINER SERVICES

Container Services allow you to put Docker containers inside your storage, for fast processing, task automation and high availability.

## CONTAINERS ADD VERSATILITY, RELIABILITY, AND PERFORMANCE.

Activate Docker containers inside your Zadara storage for lightning-fast performance, task automation, and application high availability. Zadara's convergence of Docker container technology into a pair of virtual controllers, makes running processing inside storage possible. The virtual controllers have direct, low-latency access to your SSDs and HDDs, for high-throughput IOPS to the Docker container running within.

We call the container an app, and like the virtual controller, it has dedicated CPU and memory, which can be increased and decreased on the fly, non-disruptively. Uniquely, Zadara offers Docker high availability, thanks to Zadara's dual-controller architecture with auto-failover.
