

zadara

Secure virtual workspaces  
on affordable  
cloud infrastructure

## A solution for MSPs that will add to your bottom line

Inuvika offers a digital workspace software solution, built on Linux, that allows you to deliver Windows and Linux virtual apps and desktops as a DaaS offering.

It is a secure, easy to administer and cost-effective alternative to Citrix or VMware DaaS solutions.

All of this, while delivering an exceptional end-user experience.

With Inuvika installed on Zadara infrastructure, you get Inuvika's SPLA concurrent user pay-per-use subscription model along with all of the benefits of Zadara's pay-for-use cloud services, enterprise-grade compute, networking and storage.

## A combined offering that will improve your competitiveness

(or help you slay your competition, if we want to be more dramatic?)

**Work-From-Anywhere**  
Provide secure remote access to employees without a VPN

**Data Protection**  
Apps and data are safely stored within your cloud data center

**Legacy Apps**  
Maintain legacy apps in cloud computing

**PC Alternatives**  
Instantly access virtual workspaces on any device

Inuvika and Zadara combined solution offers the most robust and profitable way to deliver your managed solutions to customers and create incredible long-term value.

Inuvika's OVD Enterprise running on Zadara IaaS delivers:

**GREAT USER EXPERIENCE**

Access both Windows and Linux apps together on any desktop, laptop and mobile device powered by Zadara's managed infrastructure.

**SECURE BY DESIGN**

Both Zadara and Inuvika solutions are built on the principle of Zero Trust. Administrators have granular control of user access, and functionality can be enabled and disabled on a user, group or global basis.

**EASY TO MANAGE**

The solution comes with 24x7x365 support on infrastructure while Inuvika OVD environment is managed through a single, easy-to-use Web console.

**LOWER COST OF OWNERSHIP**

The combined solution is sold as a simple, all-inclusive subscription plan and has a total cost of ownership (TCO) as little as 50% of other virtual desktop alternatives. You will need less server infrastructure, fewer Microsoft licenses and not separate gateway solutions such as Citrix NetScaler/ADC.
